

Chameleon KC19820C

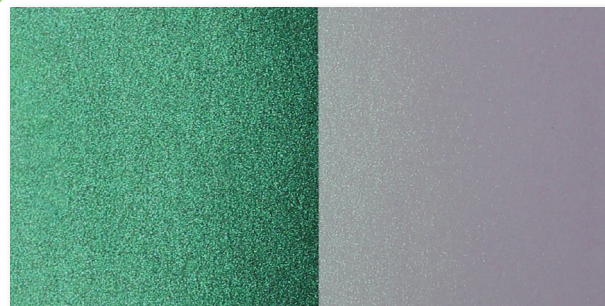

SPECIAL FLASH GREEN RED

Product Information

TENSION AND TRANQUILITY

Both are dependent on each other. They are inextricably linked by their difference and interaction.

Eye-catching, **intense multicolor effects** ranging from an light magenta purple to a very vivid green combined with a highly reflective three-dimensional sparkle.

KC19820C is the interplay of two opposites. **Light purple-red** and **intense green interference reflections** combined in one pigment. That creates an exciting range of head-turning interference shades in the final product, changing color as observers pass by.

This pigment is based on calcium aluminum borosilicate, coated with TiO_2 and SnO_2 , ensuring a **bright and pure appearance on your surfaces** as the effect influence on the surface color is minimal.

CHAMELEON KC19820C

Optical Features	Special Product Features
Brilliant green to light magenta purple color travel	Glittering bright green-red-lilac interference color flop on borosilicate
Exceptional sparkle	Allows the neutral base color of the substrate to shine through
Impressive interference green changing to a soft magenta tone under a flat observing angle	Eye-catching, ultra intense color travel effect finish
Ultra-transparent	Suitable for all common applications for effect pigments
Virtually no effect on the surface color	Multilayer Technology

ORDERING INFORMATION

Product	Color	Package size
KC19820C Special Flash Green Red	Green red multicolor	samples, 1 kg, 5 kg, 25 kg

PRODUCT INFORMATION

Property	Chemical Name	CAS no. / Value
Composition	Calcium Aluminum Borosilicate	65997-17-3
	Titanium Dioxide (TiO_2)	13463-67-7
	Tin Oxide (SnO_2)	18282-10-5
Particle size distribution		30-120 μm
pH Value		7.0 -11.0
