

FANCY COLOR DIAMONDS

Borostar 3D Flashing Diamonds

Irresistible. Desirable. Mystical.

Luminous, sparkling diamonds have always exerted a special fascination and attraction. Only the right cut gives a diamond its dazzling brilliance, its uniqueness and brings out its many facets.

Natural colored diamonds are rare and valuable. Experts refer to them as fancy color diamonds.

Sparkle with Multicolor Highlights

Explore our range of stunning effect pigments based on calcium aluminum borosilicate with fascinating multicolor highlights and the scintillating sparkle of fancy color diamonds. These pigments are highly transparent and produce a striking glitter effect with high reflectivity, superb chroma and a clean mass tone.

With their exceptional properties, this product portfolio is extremely well suited to decorative and personal care cosmetics. Even low dosages of pigment have a significant impact on the final color effect, especially in transparent formulations.

Colors that Capture the Rainbow

Our COSMI 950 3D Flashing Diamond series captures the colors of the rainbow and is available in Silver White and six interference colors: Gold, Red, Purple, Blue, Turquoise and Green.

This variety of colors is ideal for creating eye-catching accents and to give your products a compelling and alluring look. The rainbow-colored glitter effect is achieved through a particle size distribution of 20-100 μm which is also responsible for the irresistible brilliance of the pigments.

Find inspiration and give your products that added extra edge.
